Congratulations, you have purchased the finest custom air cleaner that money can buy. With proper care, this filter will last 1 million miles or more.

This custom air cleaner replaces the stock air cleaner assembly. The following procedure **MUST** be followed to ensure a proper fit and seal of the custom air cleaner.

**TOOLS NEEDED:**
- Ratchet
- 7/16” socket
- T27 TORX
- Flat Blade Screwdriver
- 5/16” allen
- 3/16” allen

**TO START:**
1. Turn off the ignition and disconnect the negative battery cable.
2. Remove the decorative engine badge from the bonnet. **NOTE:** It is held on with Velcro, a small screwdriver may be helpful to pry it off.
3. Remove the bolt that secures the bonnet to the air filter and then remove the bonnet.
4. Remove the three bolts that secure the bonnet mounting bracket and air filter, and then remove the bracket and air filter from the vehicle.
5. Remove the two breather bolts that secure the filter base to the engine and then remove the filter base from the engine. **NOTE:** K&N Engineering, Inc. recommends that customers do not discard the factory air intake components.
6. Install the provided venturi into the K&N® back plate as shown. **NOTE:** Align the locating tab on the back side of the venturi with the notch on the back plate.
7. Install the three throttle body bolts supplied though the holes in the back plate and venturi.

If you need any assistance please call 1-800-858-3333 to speak with a representative in our Customer Service Center before returning the product.

**NOTE:** **FAILURE TO FOLLOW INSTALLATION INSTRUCTIONS AND NOT USING THE PROVIDED HARDWARE MAY DAMAGE THE INTAKE TUBE, THROTTLE BODY AND ENGINE.**
ROAD TESTING:

1. Start the engine with the transmission in neutral. Listen for air leaks or odd noises. For air leaks secure hoses and connections. For odd noises, find cause and repair before proceeding. This kit will function identically to the factory system except for being louder and much more responsive.

2. Test ride the vehicle. Listen for odd noises or rattles and fix as necessary.

3. If road test is fine, you can now enjoy the added power and performance from your kit.

4. K&N Engineering, Inc., requires cleaning the intake system’s air filter element every 50,000 miles. When used in dusty or off-road environments, our filters will require cleaning more often. We recommend that you visually inspect your filter once every 25,000 miles to determine if the screen is still visible. When the screen is no longer visible some place on the filter element, it is time to clean it. To clean and re-oil, purchase our filter Recharger® service kit, part number 99-5050 or 99-5000 and follow the easy instructions.

15. Reconnect the vehicle’s negative battery cable. Double check to make sure everything is light and properly positioned before starting the vehicle.

16. The C.A.R.B. exemption sticker, (attached), must be visible under the hood so that an emissions inspector can see it when the vehicle is required to be tested for emissions. California requires testing every two years, other states may vary.

17. It will be necessary for all K&N® custom air cleaners to be checked periodically for realignment, clearance and tightening of all connections. Failure to follow the above instructions or proper maintenance may void warranty.

INTAKE SYSTEMS FOR VEHICLES LISTED ARE 50 STATE LEGAL. SEE KNFILTERS.COM FOR CARB STATUS ON EACH PART FOR A SPECIFIC VEHICLE.
