Congratulations, you have purchased the finest air filter that money can buy. With proper care, this filter will last 1 million miles or more. This filter can be used in a stock machine, with no modification required. If any engine modifications have been made tuning/jetting adjustments may be required. There are special installation instructions, so please follow the procedures outlined below to ensure the K&N air filter seals properly.

## **INSTALLATION:**

- 1. Remove stock air filter per owners manual.
- Using the provided K&N sealing grease, place a bead of grease around the parameter of the filter.
   Note: This is to help with the installation of sliding the K&N air filter in the air box and later removal. Fig 1
- 3. With the sealing side of the K&N air filter facing the rear of the air box, proceed to push the air filter into the air box.
  - Note: Apply pressure to the air filter on the outside edges so damage of the pleats does not occur. Fig 2
- 4. To ensure that the filter is in all of the way make sure that the seal is flush with the air box. Fig 3
- 5. Reinstall the air box cover and tighten screw. Fig 4

## THESE INSTRUCTIONS MUST BE FOLLOWED EVERY TIME THE FILTER IS SERVICED, OTHERWISE THE FILTER MAY NOT SEAL, AND DAMAGE TO THE ENGINE COULD RESULT.
